ST3188 Coursework

Research Proposal for Marriott International

Presented to: University of London, SIM Global Education

Course : Statistical Methods for Market Research (ST3188)

Prepared by: Darren Alexander

Advisor/Lecturer: Caleb Tan

1 March 2025

Word count: 2992

Executive Summary

Marriott International is a global hospitality brand recognized for its commitment to highly personalized services and eco-friendly sustainability initiatives. To maintain its competitive edge in the hospitality industry, Marriott aims to address three key aspects: expanding its global presence, enhancing guest experiences through technology, and reducing environmental impact while supporting local communities.

Through the client brief, we have identified the 3 Research Aims (RAs):

Research Aim 1: Identify emerging travel trends and destination hotspots, including the influence of economic factors on travel behaviours across brands and regions.

Research Aim 2: Asses guest satisfaction across different and operating segments, and their preferences for new personalised services and technology

Research Aim 3: Evaluate the effectiveness of loyalty programs and explore the impact on sustainability initiatives on customer loyalty with detailed analysis for each demographic segments.

To further analyse the various variables, Research Questions (RQs) and measurable Research Objectives (ROs) will be constructed. This proposal will outline the data collection process, along with the methodology, which includes the research design and statistical approaches used to address each research objective. Additionally, the proposal will state the sampling design and appropriate sample sizes for both Marriott customers and non-Marriott customers, ensuring a representative dataset for reliable analysis. Lastly, this study will propose analytical methods and hypothesis testing to validate research findings.

1. Introduction

1.1 Background Information

Marriott International is one of the largest hospitality brands, operating nearly 9,000 properties across 141 countries and territories under 30 brands, including Marriott, Sheraton, and The Ritz-

Carlton. The company also offers diverse brand portfolio includes luxury, premium, select-service, and midscale hotels, catering to a broad range of travellers. Currently, Marriott International is navigating post-pandemic recovery by strengthening its digital presence, personalizing guest experiences, and implementing sustainability initiatives to minimize its environmental impact. Additionally, the company also aims to maintain its competitive positioning as a leading brand among its competitors such as Hilton, Hyatt, Accor SA, and InterContinental Hotels Group through its Bonvoy loyalty programs and the expansion of its global footprint via acquisitions and partnerships.

1.2 Problem Definition

Based on the client's brief, Marriott International aims to expand its global presence. To achieve this, the company is increasing its hotel properties through acquisitions and enhancing brand diversity, prioritizing exceptional guest experiences by leveraging technology and personalized services, and reducing its environmental impact by supporting local communities. Additionally, these areas should be addressed to support Marriott in achieving it. Firstly, to expand its global presence and brand diversity, emerging travel trends and key destination hotspots will be thoroughly analysed, along with guest satisfaction across different brands and regions. Secondly, in achieving exceptional guest experiences, there is a need to analysed guest preferences for personalized services and technology integration. Lastly, in reducing Marriott's environmental footprint, further exploration of the effectiveness of sustainability initiatives on customer loyalty will also be conducted to ensure a meaningful impact. This approach aligns with customer expectations while ensuring high environmental standards.

1.3 Research Aims

This research will primarily focus on the research objectives outlined in the Marriott International client brief, as well as providing recommendations regarding their key concerns. Through an in-depth review of the client brief, we have identified three core research aims to be addressed. Below are the research aims:

Research Aim 1: Identify emerging travel trends and destination hotspots, including the influence of economic factors on travel behaviours across brands and regions.

Research Aim 2: Asses guest satisfaction across different and operating segments, and their preferences for new personalised services and technology

Research Aim 3: Evaluate the effectiveness of loyalty programs and explore the impact on sustainability initiatives on customer loyalty with detailed analysis for each demographic segments.

1.4 Research Questions & Research Objectives

Based on the Research Aims (RAs) above, we have developed Research questions (RQs), as well as Research Objectives (ROs) to address each aim. Below are the research questions and objectives corresponding to each research aim:

a) For RA1:

Research Question 1.1: What are the emerging travel trends and hotspots that influence travel behaviours?

Research Question 1.2: How do economic factors affect travel behaviour in destinations and accommodation choices?

By addressing these questions, we aim to identify current emerging travel destinations that impact travel behaviour. This insight will help determine strategic regions for Marriott International to expand its market and understand the economic factors that shape travel behaviour.

ROs proposed:

Research Objective 1.1: Identify latest travel trends influencing traveller preferences and behaviours.

Research Objective 1.2: Examine the correlation between economic factors in respond to change in travel behaviours.

b) For RA 2:

Research Question 2.1: Is there a significant difference in satisfaction levels between corporate and leisure customers?

Research Question 2.2: What are the new services and technology integration do guest prefers the most?

By addressing these questions, we aim to analyse variations in satisfaction levels between corporate and leisure customers and identify the most preferred new services and technological integrations among guests. This will provide valuable insights in enhancing customer experience to meet the diverse needs of different customer segments.

ROs proposed:

Research Objective 2.1: Asses the satisfaction levels between corporate and leisure customers based on their preferences for personalised services.

Research Objective 2.2: Identify the most preferred new services and technological integrations among guests.

c) For RA 3:

Research Question 3.1: Which loyalty programs have a significant impact on customer loyalty?

Research Question 3.2: What are the clusters of sustainability initiatives that enhance customer loyalty?

By addressing these questions, we aim to identify the most impactful loyalty programs that influence customer loyalty and classify key clusters of sustainability initiatives that enhance guest retention.

ROs Proposed:

Research Objective 3.1: Identify the loyalty programs that have highest influence on customer loyalty.

Research Objective 3.2: Classify sustainability initiatives into different cluster based on their impact on customer loyalty

2. Methodology

2.1 Research design

Based on the findings from the research aims, research questions, and research objectives, it is required to apply exploratory, descriptive, and causal research designs to gain insights about customer preferences, satisfaction levels, loyalty drivers of sustainability initiatives. Exploratory research is conducted to understand customer travel behaviours and preferences, particularly in Marriott's services and sustainability initiatives. The descriptive research follows a multiple cross-sectional design, capturing data from different customer segments, including corporate and leisure customers. Meanwhile, causal research employs pre-experimental designs to explore the relationship between Marriott's loyalty programs and sustainability initiatives.

This proposal will adopt both quantitative and qualitative research to provide a understanding of customer behaviour. Quantitative research involves formulating hypotheses and testing them

through multivariate analysis techniques. Meanwhile, qualitative research involves focus group that would be interviewed to gain deeper insights into their preferences and expectations. Additionally, conjoint analysis will explore customers' most valued hotel services and preferences for sustainability initiatives.

Primary data will be collected through focus groups and online questionnaires or surveys, due to their cost efficiency, ease of data collection, and high response rates. To ensure accuracy and minimizing error, each participants will be given $20. Additionally, Marriott's organisational database serves as a source for secondary data collection, allowing for an analysis of historical customer trends and loyalty behaviours.

2.2 Primary Data & Secondary Data

Data Collected:

Variable	**Data Type**
Customer segments	Categorical
Age	Categorical ordinal/Continuous
Gender	Categorical nominal
Preferred destination	Categorical nominal
Travel budget	Continuous
Satisfaction levels	Numerical (Likert scale 1-5)
Technological preference	Numerical (Likert scale 1-5)
Sustainability initiative impact	Numerical (Likert scale 1-5)

Table 1: List of Primary Data collected

Variable	Data Type
Past customer satisfaction score	Numerical (Liker scale)
Loyalty program participation	Continuous
Hotel occupancy rate	Continuous

Guest demographics	Categorical nominal

Table 2: List of Secondary Data collected

3. Data Collection

3.1 Sampling Method

This research will use a stratified sampling method to ensure a representative and balanced selection of respondents from different customer segments. Stratified sampling is the most appropriate approach as it divides the population into different subgroups (strata) based on Marriott customers and non-Marriott customer. Within each strata, participants will be selected randomly, ensuring that each category is fairly represented in the research.

This method is optimal for Marriott's research because it eliminates sampling bias, enhances accuracy, and allows for meaningful comparisons across different customer groups. By proportionally selecting participants from each stratum, the research will provide a comprehensive understanding of customer preferences, satisfaction levels, and loyalty behaviours.

3.2 Selecting Sample Size

Selecting an appropriate sample size is very important in ensuring the accuracy and reliability of research analysis. To determine the appropriate number of participants, we conduct the stratified

sampling method, as outlined earlier. This approach ensures that each customer segment is proportionally represented, enhancing the validity of the research.

To calculate the sample size needed with 95% confidence interval (5% significance level), we use Cochran's Formula:

$$n \geq \frac{Z_{\frac{\alpha}{2}}{}^2(\pi(1-\pi))}{e^2}$$

Where:

n = Sample size for Marriott customer needed

Z = Z-score for 95% confidence level (1.96)

π = Estimated population proportion (0.5)

e = Margin of error (0.05)

Substituting the values:

$$n \geq \frac{(1.96)^2 \times 0.5(1-0.5)}{(0.05)^2}$$

$$n \approx 385 \ (nearest\ whole\ number)$$

From this result, the sample size required is at least 385.

However, there also might be an incidence rate of 50% and completion rate of 60%, so there is need to adjust the sample size using this formula: $n = \frac{385}{0.5 \times 0.5} = 1540$. Thus, the new sample size needed to ensure the preciseness of market research is 1540 customers.

3.2.1 Marriott Customers

In the client brief, Marriott International requested a minimum sample size of 5,000 respondents from its global customer base. Given an estimated completion rate of 50%, Marriott should distribute the survey to at least 10,000 customers across different segments to achieve the desired number of responses. The questionnaire can be distributed through Marriott Bonvoy email campaigns, as well as via the Marriott Bonvoy website and mobile app. Additionally, to enhance participation rates and ensure research validity, incentives will be offered to customers who complete the online survey.

3.2.2 Non-Marriott Customers

To gather insights on non-Marriott customers and competitor customers, Marriott should utilize online surveys as an effective method to reach these groups. One of the most cost-efficient techniques is through social media platforms such as Facebook, Instagram, and YouTube.

In terms of market share, Marriott International accounts for approximately 17.55% of total revenue in the hospitality industry. Using this market share percentage, we can estimate the number of non-Marriott and competitor customers to whom surveys should be distributed.

$$\text{Explanation} = \frac{5000\ x\ 82.45\%}{17.55\%} \approx 23490(nearest\ whole\ number)$$

To obtain 5,000 completed responses from non-Marriott and competitor customers, Marriott would need to distribute the survey to approximately 23,490 individuals. However, reaching such large amount would be time-consuming. Instead, Marriott should consider a smaller sample size of 1,000 respondents, which would require approximately 4,698 survey invitations.

3.3 Focus Group Discussions

Focus group discussions will be conducted online, with one moderator and eight participants per session. Each session will last 80 minutes, ensuring meaningful engagement and in-depth discussions. Each participant will have approximately 10 minutes to share their insights. Participants will primarily be selected from those who have completed the survey questionnaires, ensuring a diverse and relevant sample.

The sessions will be hosted on Zoom and Google Meet, as these platforms offer recording features that facilitate a comprehensive analysis of the discussions. A total of 10 focus groups will be conducted, divided into three categories: five groups of Marriott customers, three groups of non-Marriott customers (who stay at competing brands), and two groups of non-Marriott and non-competitor customers (who prefer alternative accommodations such as Airbnb).

3.4 Online Questionnaires

We will conduct online questionnaires to gather insights from different customer segments. These questionnaires will serve as a primary data collection as outlined in the previous page. The survey will begin with general demographic questions, including gender, age, travel preferences, and travel budget, to establish respondent profiles. Participants will then be categorized into three groups: Marriott customers, non-Marriott customers (who stay at competing brands), and non-Marriott, non-competitor customers (those who prefer alternative accommodations such as Airbnb).

At the end of the questionnaire, respondents will have the option to fill out an interest form to participate in a focus group study, allowing for deeper qualitative insights. The survey will be distributed online through email invitations, QR codes placed in Marriott hotel properties, and pop-up forms on the Marriott website.

4. Data Analysis

4.1 Research Objectives 1.1

To identify the latest travel trends influencing travel behaviours, qualitative research through focus groups is one of the most effective methods. Focus group will be conducted through analyzing the key variable in influencing travel decisions, such as destination preferences, sustainability initiatives, social media exposure, economic conditions, and accessibility. These factors enable us to explore why travelers make certain choices and how external aspect influences their behavior. For this research, a group of 10 participants will be selected to participate in this discussion. The interviewer will ask questions related to the key factors ensuring that participants share their personal travel experiences, and expectations for future travel trends.

Travel factor	Questions
Destination preferences	"Do you prefer to travel on cultural immersion or adventure seeking travel?"
Sustainability initiatives	"How important is sustainability initiatives in you travel choices?
Social media	"How do social media impact your choice of destinations?"
Economic factor	"What is your typical travel budget?"
Accessibility	"How important is accessibility when choosing a travel destination?"

Figure1: Variables

4.2 Research Objectives 1.2

To examine the correlation between economic factors impacting on change in travel behaviors, the best statistical approach to use is Multiple Linear Regression (MLR) analysis. The independent variables for the MLR are travel budget, income level, currency exchange rate, accommodation cost, and transportation cost. While, the dependent variable is the amount of travelling per year.

Formulating the hypothesis as below:

H_0: There is no relationship between the economic factors and change in travel behaviours.

H_1: There is a relationship between the economic factors and change in travel behaviours.

The general equation of Multiple Linear Regression is

$$\widehat{Travel\ behavior} = \widehat{B_0} + \widehat{B_1} Income + \widehat{B_2} exchange\ rate + \widehat{B_3} accomodation\ cost + \widehat{B_4} transportation\ cost$$

Where:

$\widehat{B_0}$ = The intercept, value of $\widehat{Travel\ behavior}$ when variables are zero.

$\widehat{B_\iota}$ = The amount changes in travel behaviours when the particular X_i increase by 1 unit with all other independent variables remain constant.

Model	**Unstandardised Coefficients**		**Standardised Coefficients**	**t**	**Sig**	**95% Confidence Interval for B**	
	B	**Std. Error**	$\boldsymbol{\beta}$			**Lower Bound**	**Upper bound**
(Constant)							
Income							
Exchange rate							
Accommodation cost							
Transportation cost							

Figure 2: Coefficients and t-test tables

Model	**R**	**R-Square**	**Adjusted R^2**	**Standard Error of Estimate**

1				

Figure 3: R and Adjusted R square table

We will utilize t-tests and F-tests to see the significance of each variables and overall model. If both t-test and F-tests are significant, then we reject the null hypothesis (H_0). Moreover, adjusted R-square can be used to measure the degree of correlation in the multiple linear regression analysis, with higher R-squared indicating a better fit of the model for this research.

4.3 Research Objectives 2.1

For this research objective, we will use statistical approach of independent samples t-test and determine whether there is a significant difference in satisfaction levels between corporate and leisure customers based on their preferences for personalized services

Formulating the hypothesis as below:

H_0 : There is no significant difference in satisfaction between leisure customers and corporate customers.

H_1 : There is significant difference in satisfaction between leisure customers and corporate customers.

From the Group Statistics Table we can compare the mean rating of satisfaction between leisure customers and corporate customers.

	Group	**N**	**Mean**	**Std. Deviation**	**Std. Error Mean**
Customer Satisfaction	**Corporate Customer**				

	Leisure Customer				

Figure 4: Group statistics table

To verify the assumptions of equal variances, it is essential to use Levene's test to ensure that the variables are homogeneous. If t-test statistic falls beyond the critical t-value, the null hypothesis (H_0) will be rejected. This indicated that there is a significance difference in the mean ratings of satisfaction levels between leisure and corporate customers.

		Levene's test for equality of variances		**t-test for Equality of Means**					**95% confidence interval of the difference**	
		F	**Sig**	**t**	**df**	**Sig. (2-tailed)**	**Mean difference**	**Std. Error Difference**	**Lower**	**Upper**
Perception score	**Equal variances assumed**									
	Equal not assumed									

Figure 5: T-test table

4.4 Research Objectives 2.2

To identify the most preferred new services and technological integrations by Marriott International customers, we will use Factor Analysis. This statistical approach allows us to identify underlying correlations between customer satisfaction and various new services.

Likert Scales	Not Important				Very Important
	1	2	3	4	5
Personal assistant					
In-room voice assistants					
Virtual lounge					
3D hologram projector					
High-end premium devices					
Luxury vehicles					

Figure 6: Variables

Formulating the hypothesis as below

H_0 : There is no significant relationship between customer preferences and technological services.

H_1 : There is significant relationship between customer preferences and technological services.

To further validate the credibility of the factor analysis, a pairwise correlation matrix is used to assess the relationships between variables. if the Kaiser-Meyer-Olkin (KMO) measure exceeds 0.5 and if Bartlett's test of sphericity is significant at the 0.05 level, then factor analysis is suitable for this research. Additionally, factor analysis groups closely related technological services into one cluster. The most significant factor groups are selected based on eigenvalues greater than 1 and factor loadings above 0.4.

4.5 Research Objectives 3.1

To identify the loyalty programs that have the highest influence on customer loyalty, the statistical approach used will be Multiple Linear Regression (MLR). For this analysis the dependent

variables (loyalty programs) will be limousine service, extended check-out, free night, and points redemption. While, the dependent variable will be customer loyalty score

Formulating the hypothesis as below:

H_0: There is no significant relationship between loyalty programs and customer loyalty score.

H_1: There is significant relationship between loyalty programs and customer loyalty score.

The general equation of Multiple Linear Regression is

$$\widehat{Loyalty\ score} = \widehat{B_0} + \widehat{B_1} limou\ service + \widehat{B_2} extended\ check\ out + \widehat{B_3} free\ night + \widehat{B_4} point\ redemption$$

Where,

$\widehat{B_0}$ = The intercept, value of $\widehat{Loyalty\ score}$ when variables are zero.

$\widehat{B_i}$ = The amount changes in loyalty score when the particular X_i increases by 1 unit with all other independent variables remain constant.

Model	**Unstandardised Coefficients**		**Standardised Coefficients**	**t**	**Sig**	**95% Confidence Interval for B**	
	B	**Std. Error**	***β***			**Lower Bound**	**Upper bound**
(Constant)

Extended check out							
Free night							

Points redemption							

Figure 7: Coefficients and t-test tables

Model	**R**	**R-Square**	**Adjusted R^2**	**Standard Error of Estimate**
1				

Figure 8: R and Adjusted R square table

We will utilize t-tests and F-tests to see the significance of each variables and overall model. If both t-test and F-tests are significant, then we reject the null hypothesis (H_0).Moreover, adjusted R-square can be used to measure the degree of correlation in the multiple linear regression analysis.

4.6 Research Objectives 3.2

For the last research objectives, we will use Ward's cluster analysis to classify each sustainability actions into cluster and evaluate their impact on customer loyally. To conduct the cluster analysis, the first thing to do is to decide the cluster groups for every sustainability initiatives.

Clusters	**Sustainability Actions**
Childcare	**Building orphanages, scholarship funding, youth mentorship program**
Environment	**Conversation fundings, reducing of plastic waste, reforestation on damaged forest**
Humanitarian	**Food donations, Building accommodations for old folks, free healthcare**

Figure 9: Cluster tables

	Std. Deviation						
3	**Mean**						
	N						
	Std. Deviation						
Total	**Mean**						
	N						
	Std. Deviation						

Figure 10: Ward's method for cluster analysis

This analysis will allow Marriott International to examine which sustainability initiatives that enhance customer loyalty.

5. Further Research

To maintain its global leadership in the hospitality industry, Marriott International should continue to evolve in technology advancements and sustainability trends. In terms of technology, Marriott can explore the role of artificial intelligence (AI) and automation in enhancing customer engagement through innovations such as AI-powered concierge services, and smart room technology. These advancements can increase guest experiences and improve overall service efficiency. As sustainability remains a key priority, Marriott should investigate how eco-friendly initiatives influence customer loyalty and their willingness to pay a premium for green hospitality experiences. By integrating sustainable practices, such as energy-efficient hotels and waste reduction programs, Marriott can strengthen its reputation as an environmentally responsible brand.

6. Conclusion

Ultimately, this research will help Marriott International to enhance its hotel properties, technological services, and sustainability initiatives, ensuring increase in customer satisfaction. Once the online focus group discussions and surveys are completed, the collected data can be

analyzed to identify key customer preferences, emerging travel trends, and the most effective sustainability initiatives that influence customer loyalty. Additionally, this research will also support Marriott's in expanding its global presence and strengthen its brand positioning within the hospitality industry.

7. Questionnaires

7.1 General Questionnaires

Marriott Hotels is a global hospitality brand and the flagship brand of Marriott International, one of the world's largest hotel chains. Marriott offers wide range of brands ranging from luxury (Ritz-Carlton) to mid-range (Courtyard). Besides that, Marriott also offers high-quality services and amenities including accommodations, restaurants, and loyalty programs like Marriott Bonvoy. As Marriott wants to increase its global presence, we would like to know your opinion on Marriott by fulfilling this questionnaire.

1. **What is your age?**
   - Under 18
   - 19-35
   - 36-50
   - Above 50

2. **What is your gender?**
   - Male
   - Female

3. **What is your permanent residence?**

4. **What is your annual income?**
   - Less than $30,000
   - $30,000 - $59,999
   - $60,000 - $99,999
   - $100,000 and above

5. **How often do you travel in a year?**
   - Rarely (0-1 trips per year)
   - Occasionally (2-3 trips per year)
   - Frequently (4-6 trips per year)
   - Very often (more than 6 trips per year)

6. **How much is your travel budget each time you travel?**
   - Below $500
   - $500 - $1,499
   - $1,500 - $2,999
   - $3,000 and above

7.2 For Marriott International Customers

For Marriot Customers

1. What are the reasons behind your stay?

- Leisure
- Business purpose

SECTION A

2. How important are these economic factors in influencing your travel behaviours?
(1 being 'Least Important' and 5 being 'Very Important, tick that applies)

	Least Important 1	2	3	4	Very Important 5
Income level					
Currency exchange rate					
Accommodation cost					
Transportation cost					

3. What types of travel experience would you most likely to seek in the near future (1-2 years)?
(1 being 'Least Likely' and 5 being 'Most Likely', thick that applies)

	Least Likely 1	2	3	4	Most Likely 5
Adventure travel					
Cultural and local					
Beach or resort travel					
Luxury travel experiences					
Economy budget					
Nature or Wildlife					

4. What are the destinations that you are most likely to visit in the near future (1-2 years)?
(1 being 'Least Likely' and 5 being 'Most Likely', tick that applies)

	Least Likely 1	2	3	4	Most Likely 5
Nature Focused					
Urban and Modern Cities					
Sports Destinations					
Events Driven Destinations					
Theme Parks					
Traditional Popular Cities					

SECTION B

Our goal is to offer exceptional guest experiences with Marriott; therefore, we would like to know your opinion on these new services for customers satisfaction (leisure & corporate).

5. How much do these new services interest you? Answer if you chose 'Leisure'
(1 being 'Not interested' and 5 being very interested', tick that applies)

	Not interested 1	2	3	4	Very interested 5
Personal Assistant (24x7)					
Personalised AI Humanoid					
Virtual Lounge					
Virtual Concierge Services					
In Room Voice Assistants					

6. How much do these new services interest you? Answer if you chose 'Business'
(1 being 'Not interested' and 5 being very interested', tick that applies)

	Not interested 1	2	3	4	Very Interested 5
Virtual Reality Meeting Room					
3D Hologram Projector					
AI and Machine Learning for Business Insights					
High-end Premium Devices					
Luxury Vehicles					

SECTION C

We value customer loyalty, as well as sustainability. Therefore, we would like to know your opinion on our current loyalty programs and sustainability initiatives.

7. Are you part of Marriott loyalty Bonvoy program?

- Yes
- No

8. How was your experience as part of the loyalty program?

- Excellent
- Good
- Average
- Poor
- Very poor
- I am not part of the Bonvoy program

9. Which are the Marriott loyalty programs that you prefer the most?
(1 being 'Strongly Dislike' and 5 being 'Strongly Like')

	Not Important 1	2	3	4	Very Important 5
Limousine Service					
Extended Check-out					
Free Night Awards					
Points Redemption (room upgrades and VIP access to concerts)					
Access to Exclusive Events					

10. What are the sustainability initiatives that would be most important to you?
(1 being 'Not Important' and 5 being 'Important')

	Not Important 1	2	3	4	Very Important 5
Building Orphanages					
Scholarship Fundings					
Youth Mentorship Programs					
Conversation Fundings					
Reforestation					
Free Healthcare					
Food Donations					

7.3 For Non-Marriot International Customers

For Non-Marriot Customers

1. Are you willing to stay at Marriott International any time soon in the future?

- Yes
- No

2. What are the reasons behind your stay?

- Leisure
- Business purpose

SECTION A

3. How important are these economic factors in influencing your travel behaviours?
(1 being 'Least Important' and 5 being 'Very Important, tick that applies)

	Least Important 1	2	3	4	Very Important 5

7.4 Interest Form

Focus group Interest Form

Thank you for participating in our Focus Group Discussions to share your insights on Marriott's services. We value your honest feedback as it helps us to enhance our hospitality services to better meet your needs. By completing this form, you consent to participating in the online focus group, which is expected to last 80 minutes. Details regarding the discussions will be sent to you via email within 3 working days. As a token of our appreciation, we will award you with $20 upon completing the Focus Group Discussions.
